

# HERMIT CAB

***Hermit Cab: for the most meticulous of sound direction and control!  
Helping guitar players achieve their ideal sound in all environments.***

Hermit Cab offers a line of unique patented speaker cabinet designs that allow musicians to completely control their sound through a new design utilizing baffles, isolation, and built in microphones. Although Hermit Cab's initial focus is on cabinets for guitar amplification, designs for bass and other stringed instruments are in R&D and a few current designs work equally well for both guitar and bass.

Richard Fortus, Guns N' Roses' guitarist said "We compared every cabinet we had against these cabs when we were figuring out what we needed for the tour, and the hermits won every time," Fortus said. "We are stoked and have a clear winner." Richard added "And now with the completed success of the winter 2009 tour, Guns N' Roses will continue using Hermit Cab's for their world tour." Five Hermit Cab type 5RF 4x12's are on tour with Guns 'n' Roses.

The main purpose of this cab is to serve as an alternative to a power attenuator by isolating, defusing and directing the sound coming out of the speakers. Players can now achieve a maximum tonal experience live and in the studio by cranking the amp with almost 100 percent isolation from other sound sources.

With the "Ultra Light Microphone Placement System" one or more microphones can be installed and are fully adjustable within the cabinet to the precise spot of choice in front of the speaker. The mic cord plugs directly into the Nutrix mic jacks on the jack panel to which the internal microphone cable is connected, allowing for full sound isolation. The cabinet's internal baffle houses the speakers at the correct predetermined degree angle (*depending on the model*).

The Type 2 and Type 5 have hinged door panels front and back (*on most models*). The hinged door panels have two types of hinges that allow the door panels to be opened a select amount and to remain open and set to the desired position to tune the Hermit Cab to any environment. One hinge allows the door panels to go from closed to desired position to tune the Hermit Cab to any environment. One hinge allows the door panels to go from closed to open and anywhere in between. The other is a custom hinge that holds the door panels in any location placed for the desired volume and diffusion. Opening the door panels attenuates the volume mechanically and defuses the sound 180 degrees off the panel so that the player (*and the rest of the band*) can hear it, but the sound man can't and the audience receives less direct sound. The defusing effect of the panels gives the player the desired sound that is usually heard at 8 to 12 feet from the cabinet at a distance of only 1 to 5 feet.

## Hermit Cab's

Club Series Type 2 1x12  
Club Series Type 2 2x12  
Club Series Type 2 Ultra Light 1x12  
Club Series Type 2 Ultra Light 2x12  
ATA 1x12 16 inch Cube  
ATA 1x12 20 inch Cube  
ATA 1x12 Type 5  
ATA 2x12 Type 5  
ATA 4x12RF Type 5  
ATA 4x12 3D Type 5

## Extra's

2nd "Ultra Light Variable Microphone Placement System"  
Stereo/Mono Switch  
Parallel Nutrix Amp Inputs  
Choice of Laminate Colors & Coverings  
Variable Rear Door on 4x12's  
Oversized Cabinet  
Caster Board  
Tote Pull-Out Handle & Corner Wheels for ATA Cubes  
Speakers  
Microphones

The Club cabs are now available in two different styles; the original Hermit Cab Club has defining details that were designed to stand out on stage, and the new LW or new light weight style while sporting less cosmetic details still looks good and offers the same performance at a noticeably lower weight. DeadEnd Cabs - *Coming Soon!*

## Standard Options:

ATA; built in corner handles and all related high quality standard ATA hardware  
Single "Ultra Light Variable Microphone Placement System"; includes Nutrix mic cord receptacle, installed wiring & single versatile hanging hardware  
Variable front and rear door standard on all but 4x12RF  
Nutrix locking amp inputs & wiring

## ATA 16inch CUBE 1x12 TYPE 5

The ATA cabs are both a high quality ATA approved flight case and a fantastic and versatile speaker system all in one. They work the same as the Club series while sporting more industrial cosmetic details and can be use as both a conventional speaker cabinet and/or an iso cabinet while also being nearly bullet proof.

All Hermit Cab's come installed with a single "Ultra Light Microphone Placement System" a single microphones to be fully adjustable within the cabinet to the precise spot of choice in front of the speaker. The mic cord plugs directly into the Neutrik mic jacks on the jack panel to which the internal microphone cable is connected, allowing for full sound isolation.

### STANDARD OPTIONS

Single "Ultra Light Variable Microphone Placement System" includes Neutrik mic cord receptacle, installed wiring & single versatile hanging hardware. Variable front and rear door standard Neutrik locking amp input jacks & speaker wiring.

### EXTRA'S

- 2nd "Ultra Light Variable Microphone Placement System"
- Stereo/mono switch
- Parallel Neutrik amp inputs
- Choice of colors and coverings - call for details
- Tote Pull-Out Handle & Corner Wheels for ATA Cubes
- Speakers - contact for models and prices
- Microphones - contact for models and prices
